

• INTERNAL TRAINING • 45 MINUTES • 2026

Agentic AI in 2026.

A working tour of Claude in 2026 — the capabilities, the surfaces, and how to pick the right one for the work in front of you.

Agentic • Automations

BEGINNER → INTERMEDIATE
13 TOPICS • 30 SLIDES

• TODAY'S SESSION

What we'll cover.

01 Foundations

- What Claude can do well
- Where Claude shows up — products + surfaces
- Cowork · Claude Code · Chat · Projects

~ 22 MIN

02 Intermediate

- Skills · Connectors · Enterprise Search · Research
- When to reach for which surface
- Practical exercises & Q&A

~ 18 MIN

01

• PART ONE

Foundations.

Five things Claude does well • Where Claude lives •
The four main surfaces you'll use day-to-day.

Five things Claude does well.

01

Writing & content

Social posts, emails, reports. Iterates on tone, voice and structure with you until it sounds like you.

02

Research & analysis

Upload documents and Claude makes sense of them. 200K+ token context — up to 1M on Pro / Max / Team / Enterprise with Opus 4.7.

03

Coding assistance

Opus 4.7 is our most powerful coding model. Write, debug, and explain code across multiple languages.

04

Problem-solving & reasoning

Hybrid models — near-instant answers or extended thinking for step-by-step analysis on complex problems.

05

Learning new things

Adapts to your pace. **Learning mode** guides your reasoning process rather than handing over answers.

REMEMBER

The right surface matters as much as the right ask.

• BY THE NUMBERS

Why context window matters.

Big context means Claude can hold an entire codebase, a quarter of meeting notes, or a stack of contracts in mind at once — and reason across all of it without losing the thread.

Where Claude lives.

WEB

Claude.ai

Browser-based chat — best for conversations, writing, research, file creation.

WEB

claude.ai/design

Full design framework for marketing material and web pages.

WORKSPACE

Slack

@Claude in any thread. Searches your workspace's channels, DMs and shared files.

WORKSPACE

Excel • PowerPoint

Sidebar in Microsoft Office. Reads, analyzes, modifies, creates workbooks & decks.

DESKTOP

Cowork

For accessing & manipulating documents on your desktop. The day-to-day work driver.

DESKTOP

Claude Code

Agentic coding tool. Reads your codebase, writes & modifies code, runs commands.

DESKTOP

Chat

Lightweight conversational surface — like claude.ai, but native to your machine.

DEVELOPER

Managed agents & API

Build your own — programmatic access to Claude for production systems.

• TOPIC 02 · THE FOUR SURFACES

What it looks like.

Same Claude — four very different rooms.

WEB Claude.ai

RECENTS

Osprey launch plan

Variance Q4 review

Brand voice rewrite

CSV merge script

PROJECTS

Marketing — 2026

Onboarding hub

Compare our Q3 and Q4 marketing spend and flag anything that drifted.

Claude

Here's the side-by-side. Three line items shifted >15%:

- Paid social: \$48k → \$71k (+48%)
- Events: \$32k → \$12k (−63%)
- Creator partnerships: \$0 → \$24k (new)

Want a one-page summary for the leadership review?

Yes, summarize

Claude Cowork.

Cowork is what most people end up using daily. It runs on your machine, sees your files, runs in the background, and lets you hand it work the same way you'd hand it to a colleague.

— DO THIS

“You keep doing the same work every morning — checking messages, prepping for meetings. Set it up once as a scheduled task and Claude handles it on repeat.”

Eight moves you'll use.

01

Folder access

Point Claude at a folder; it reads, figures out what's relevant, saves work back to the same place.

02

Scheduled tasks

Daily briefings, weekly roundups — recurring work that just runs.

03

Subagents

Background workers that handle parts of a task in parallel.

04

Dispatch

Continue Cowork threads from your phone — hand off tasks that use everything on your computer.

05

Projects

Group related tasks into workspaces with their own files, context, instructions and memory.

06

Browser use

Connect Claude in Chrome — navigate websites, interact with pages, pull what it finds back in.

07

Computer use

No connector? Claude navigates your computer directly — clicks, types, opens apps.

08

Plugins

Specialized capabilities — live financial data, internal knowledge bases, compliance frameworks.

Claude works in your codebase.

Reads what's there, writes and modifies code, runs commands. Two places it can run from — and three working modes that control how much rope it gets.

LOCAL

On your machine

Select a folder; Claude works directly with those files. Reads your project, accesses local tools, runs a dev server you can preview in your browser.

REMOTE

In a cloud env

Connect a GitHub repo; sessions continue even if you close the app. Good for larger codebases or keeping dev off your local machine.

How much rope to give it.

01

Ask

Claude proposes every change and waits for your approval. Review a visual diff; accept or reject before anything is modified.

MOST CAUTIOUS

02

Code

Claude applies file changes automatically but checks with you before running terminal commands.

DEFAULT

03

Plan

Claude outlines its full approach before touching anything. A dedicated plan viewer lets you review and revisit as work progresses.

FOR BIG WORK

When you just need to ask.

Chat excels for questions, brainstorming, drafting, and working through problems back-and-forth. The quick-entry surface.

- **Quick entry.** Double-tap Option (Mac) to pull Claude up over whatever you're working on — stays on top as you switch apps.
- **Screenshots & window sharing.** Show Claude what you're looking at. Faster than describing. (Mac)
- **Dictation.** Talk through a problem when speaking is faster than typing. (Mac)
- **Desktop connectors.** Connect local tools so Claude can work with the rest of your machine.

— DO THIS

You've been jotting product-launch ideas in Apple Notes for weeks. Add the Notes connector and ask: *"Pull together everything about the Osprey launch, figure out where I left things half-finished, and check my other connected tools for anything that fills in the gaps."*

Projects = persistent context.

Use a project when you're working on something **ongoing** — not a one-off question. Reference materials you'll use repeatedly. Consistent rules for how Claude should respond. Teammates who need the same foundation.

Reference materials

Meeting notes · survey results · historical data — things you'll come back to.

Consistent requirements

"Always use formal language." "Always cite sources." "Always follow our template."

Team collaboration

Multiple people working from the same shared foundation, same shared instructions.

Three steps to set one up.

Walking through a real example: a **Quarterly Close** project the FP&A team uses every month-end.

01

Set up your project

Sidebar → Projects → **+ New Project**. Name it `FP&A – Quarterly Close`. Mark it shared so your controller and analysts work from the same context.

02

Add instructions

Tell Claude the rules: *"Always reconcile to the GL. Flag variances >5% with commentary. Use US GAAP terminology. Never invent figures — cite the source workbook and tab."*

03

Build your knowledge base

Upload the chart of accounts, the close calendar, last quarter's variance memo, and your reporting template. Link the Drive folder where TB exports land monthly.

Make them earn their keep.

— DO THIS

Australian tax reform briefing. Load the latest ATO rulings, draft Treasury legislation, your client's group structure, and prior advisory memos. Claude drafts plain-English impact notes.

• PRO TIP

When project knowledge approaches the context-window limit, Claude **seamlessly enables RAG mode** — you don't have to do anything.

Best practices

- **Start focused, then expand.** One use case at a time.
- **Keep your knowledge base current.** Stale docs = stale answers.
- **Write clear instructions.** Vague in, vague out.
- **Name files descriptively.** `Q4-2025-Variance-Memo.pdf`, `memo.pdf`.
not
- **Reference by name in prompts.** "Per the Q3 variance memo..." focuses the search.

02

• PART TWO • FOR FINANCE

Intermediate.

Skills • Connectors • Enterprise Search • Research. The four capabilities that turn Claude into a real finance partner — reconciling, modelling, drafting commentary, and pulling answers out of the systems where your numbers actually live (ERP, BI, close folders, board archives).

Skills are expertise packages.

Folders of instructions, scripts and resources that Claude loads dynamically. They teach Claude how to complete **specific tasks** in a repeatable way.

What a Skill encodes

- A quarterly variance analysis methodology
- A brand voice review process
- A compliance checklist
- Any repeatable workflow you want Claude to run the same way every time

Turning Skills on

- 01 Settings → Capabilities
- 02 Toggle **Code execution and file creation** on
- 03 Scroll to Skills section, toggle individual skills on
- 04 Ask normally — Claude picks the right skill automatically

”Generate a PDF report summarizing this data” → Claude picks the PDF skill.

• SKILLS VS PROJECTS

The *what* and the *how*.

PROJECTS

Knowledge hubs

Hold the reference materials Claude needs to understand your work — specs, notes, research, documents. Claude draws on them across every conversation.

= The *what*

SKILLS

Procedural machines

Encode how Claude should execute a task — the specific steps, order of operations and methodology you want run consistently every time.

= The *how*

A skill *can* reference knowledge stored in a project — your "customer call prep" skill might pull from customer profiles in a project's knowledge base.

From assistant to collaborator.

Connectors give Claude access to the same tools, data and context *you* use every day. Search files, retrieve documents, analyze data, create content, update records — across your connected apps.

WEB CONNECTORS

Cloud services

Google Drive · Notion · Slack · Asana · Stripe · Salesforce. Visit claude.ai/directory or click + → **Connectors** in any chat.

DESKTOP EXTENSIONS

Local apps & files

Run locally through Claude Desktop. Local file access, browser control, native app integration (e.g. Figma for design work).

MCP — the Model Context Protocol — is "USB-C for AI": one standard, any tool. That's why the connector library keeps growing.

What you can ask.

PM TOOLS

Asana • Linear • Jira

- "Highest-priority tasks due this week?"
- "Create a task for the Q4 budget review."

COMMS

Slack • Gmail

- "Find the thread on the vendor contract."
- "Draft a reply to yesterday's #marketing message."

DOCS

Notion • Drive • Confluence

- "Search docs for our brand voice guide."
- "Summarize last week's product review notes."

BUSINESS

Stripe • Salesforce

- "Revenue trends for the past quarter?"
- "Status of the Acme Corp opportunity?"

SECURITY

Claude sees what you see. Scoped access • revocable anytime • permissions toggle per app.

“Ask {Your Org}” in your sidebar.

A dedicated entry point for finding and synthesizing knowledge buried across your company's tools. Think of it as a pre-built Project for the *entire* organization.

01

Getting up to speed

- "What happened yesterday while I was out?"
- "Key updates from the last week."
- "Current blockers on the Platform project."

02

Policy & process

- "Our remote work policy?"
- "How do I submit an expense report?"
- "Process for requesting time off?"

03

Onboarding & research

- "How does our auth system work?"
- "Why do customers choose competitors?"
- "Summarize Q4 product roadmap discussions."

SAFE

Enterprise Search only shows what you already have permission to access in the source tool. Conversations stay private; connected data isn't indexed separately.

Two-step setup.

STEP 01 • ADMIN

Owners set it up once

- Click "Ask Your Org" in left sidebar
- "Set up for your org"
- Pick connectors for Documents + Chat (Email optional)
- Name the project, add description, finish

STEP 02 • USERS

Everyone authenticates

- Click the "Ask {Org Name}" project in your sidebar
- Follow the guided onboarding
- Authenticate each service (Slack, Google, M365...)
- Ask away — more connectors = richer answers

Claude as a systematic investigator.

Research transforms Claude from a conversational assistant into a researcher. Multi-step exploration that pursues leads, cross-references sources and synthesizes findings — hours of manual work done in minutes.

01

Plan the approach

Extended thinking activates automatically. Claude breaks down the request and plans how to investigate.

02

Run many searches

Searches build on each other. Claude pursues promising leads, fills in gaps.

03

Synthesize findings

Compile information from web + your connected integrations into a structured report.

04

Cite everything

Every claim links to its source. Verify, dig deeper, trust the output.

When to reach for which.

RESEARCH	Multi-source synthesis. Market analysis, competitive research, comprehensive reports with citations.	"Compare top 5 vendors for AI orchestration; pull internal notes about each."
WEB SEARCH	Quick fact. One or two sources, answer in a sentence, speed over depth.	"What's the current Fed funds rate?"
EXTENDED THINKING	Deep reasoning. No external info needed — math, debugging, logical analysis.	"Find the bug in this 200-line function."
ENTERPRISE SEARCH	Internal-only knowledge. Your docs, Slack threads, meeting notes — questions specific to <i>your</i> company.	"How does our auth system work?"

03

• PART THREE • 5 MINUTES

Pick the right tool.

Five short reference cards — Code · Slack · Excel · PowerPoint · Chrome. When you reach for each and what to expect.

• TOPIC 09

Use Claude Code when...

- ✓ You want to build features by describing them in plain English — let Claude write the code, run tests, create commits
- ✓ You need to debug — paste error messages and have Claude analyze the codebase to fix the problem
- ✓ You're navigating an unfamiliar codebase and want to ask how different parts work together
- ✓ You want to automate tedious tasks: lint errors, merge conflicts, release notes
- ✓ You prefer working in your terminal alongside your existing IDE

• TOPIC 10

Use Claude in Slack when...

- ✓ You want to draft responses, summarize threads, or break down complex discussions without leaving Slack
- ✓ You need to prep for meetings — pull together related conversations and shared docs from your workspace
- ✓ You're onboarding to a new team and want help understanding ongoing projects via channel history
- ✓ **DEMO**

• TOPIC 11

Use Claude for Excel when...

- ✓ You're working with a complex multi-tab workbook and want to understand how formulas flow across sheets
- ✓ You need to update assumptions across a model while preserving formula dependencies
- ✓ You're debugging `#REF!` , `#VALUE!` or circular references — Claude traces them to source
- ✓ You want to create new spreadsheets or populate templates with data while keeping formula structure intact
- ✓ You need to quickly build pivot tables or charts to visualize data
- ✓ **DEMO**

PowerPoint & Chrome.

POWERPOINT

Use it when...

- ✓ You want to turn an outline or doc into a first-draft deck without building each slide by hand
- ✓ You need to rewrite or tighten slide copy — shorter bullets, speaker notes, tone adjustments
- ✓ You're restructuring a deck — reordering sections, splitting dense slides, merging overlapping ones
- ✓ You want consistent formatting applied across the deck without manually fixing each slide
- ✓ **DEMO**

CHROME

Use it when...

- ✓ You want to summarize articles, research papers, or web pages while browsing
- ✓ You need help drafting email responses or managing your inbox
- ✓ You're filling out repetitive forms and want to automate the process
- ✓ You need a browsing assistant that maintains context across tabs — great for niche internal tools, CRMs, dashboards
- ✓ **DEMO**

• RECAP

Cheat sheet.

IF YOU NEED TO...	Brainstorm or ask a quick question	Chat or Claude.ai
IF YOU NEED TO...	Work with files on your machine	Cowork · folder access + scheduled tasks + subagents
IF YOU NEED TO...	Write, debug or refactor code	Claude Code · pick Ask / Code / Plan based on appetite
IF YOU NEED TO...	Reference materials across many chats	Projects · the persistent knowledge hub
IF YOU NEED TO...	Run the same workflow consistently	Skills · turn it into a repeatable procedure
IF YOU NEED TO...	Find a fact buried inside your company	Enterprise Search · "Ask {Your Org}"
IF YOU NEED TO...	Investigate a topic comprehensively	Research · multi-source, cited, structured report

• THANKS FOR SITTING THROUGH IT

Now go automate something.

Questions? We'll stick around for 10 minutes. Otherwise.
